

Secure Drone Classification System: Dataset Engineering, Model Development & Threat Evaluation

By John Smith

PJE40 – Final Year Project

Abstract

The rapid proliferation of commercial and hobbyist drones has introduced new security challenges...

[Content shortened for PDF demo: Please note this PDF includes a condensed version. Request full PDF if needed.]

Chapters:

1. Introduction
2. Literature Review
3. Project Management
4. Methodologies and Project Life Cycles
5. Analysis and Requirements
6. Design
7. Implementation
8. Testing
9. Evaluation
10. Conclusion
11. References
12. Appendices

Conclusion

The project successfully developed a complete pipeline for drone classification using CNNs, pretrained architectures, and adversarial testing.
